	Renovo
	Segway
	Tourney SC

- Compatible, order of mixing unimportant
- Compatible, must add Signature XTRA first
- Compatible, must add chemical partner first

Signature XTRA Stressgard mixture sprayed through a Tee Jet 8002E nozzle and 50 mesh screen at 32 PSI. Evaluated mesh for clogging.

This is a suggested mixing order, however, many other factors can impact compatibility such as pH of water and other free radicals in solution. This form is not a substitute for performing a jar test with the specific mixture which will be sprayed.

Science for a better life
